# Mohammed Wilkinson
## Junior Developer

**Location:** Wallasey, Wirral   **Email:** wilkinsonm302gmail.com
**LinkedIn:** https://www.linkedin.com/in/mohammed-wilkinson-0a44b1b9/
**GitHub:** https://github.com/WilkinsonM1
**Number:** 07942250766

## About Me

Highly motivated and analytical professional with hands-on experience in full stack web development with a particular interest in Javascript programming and React.

I especially enjoy the problem solving aspects of web development combined with the creative aspects of designing apps/websites.

My interest with coding started with GameMaker Studio as I wanted to make my own games, especially RPGs, so I started learning GameMaker Language (GML). A friend suggested I should become a web developer which opened my eyes to a completely different world than I was in and this excited me! I started following tutorials in how to create blogs from HTML and CSS.

## Key Skills and Achievements

- **Relationship building and communication:** designing lessons to effectively engage students as a trainee teacher

- **Problem solving:** As a salesman I had to engage with customers to find issues they were having with their energy supply and offer them solutions to them

- **Learning new skills:** In addition to learning and thriving in each of the roles I worked at I continuously practiced and learnt other skills such as oil and digital painting, and Arabic grammar.

## Tech Stack

`HTML5`  `CSS3`  `Javascript`  `React.js`  `Node.js`  `Git`  `Express.js`  `GML`

## Career Development

### Junior Developer @ Code Nation Aug 2019 – Oct 2019

Trained as a full stack developer with a focus on team work, problem solving, independent research and resilience. I focused primarily on javascript and React as I found algorithms and programming the most interesting part of development and React was a rewarding challenge to master. A particular project I'm quite proud of is my cyber pet game. This was originally just completely in Javascript and I used prompts and alerts to communicate with the user and allow user input to play the game. The main technical problem I solved here was having my game functions run in a loop using the "do while" statement while the pet was alive. I also made a website lookalike of Netflix which really helped me grasp Flexbox in CSS. Finally to develop my understanding of React I am building my personal website portfolio totally in React.

### Independent Sales Advisor @ MarketMe Liverpool Apr 2018 – Sept 2018

Managed overall aspects of event management from inception to completion for First Utility. Conducted and led training programmes for newly hired staff to increase their knowledge. Delivered exceptional services within the organisation by utilising various sales systems and business knowledge such as law of average. Developed and maintained strong and robust relationship with customers to optimise satisfaction level. Provided effective customer service by utilising five steps of a conversation to achieve compelling sales pitch and communicate ideas and lessons.

### Teacher training @ Edgehill University Sept 2015 – Feb 2017

Undertook 3 school placements: Savio Salesian college, Rosebridge academy, and Everton Free school. Taught more than 80 lessons to different classes of students aged 12-15. Learnt about constructing engaging presentations and communicate information effectively. Learnt about managing behaviour, especially difficult behaviour as well as coming up with solutions for student learning problems such as differentiating work.

## Education

**University of Liverpool – Graduated July 2015 (Sept 2011 – July 2015)**
Degree obtained: Master of Biological Sciences with Honours in Biological Sciences (Biochemistry): **First Class**

**Mosslands Sixth Form and School – Sept 2009 to June 2011**
A levels: Mathematics (A), Physics (B), Chemistry (B), Biology (B)
